

## **Part B Quantitative Section Preparation**

**Questions total:** 21

**Style:** Multiple Choice

**Time allotted:** 7 minutes

The PAF assessment (Part B) is broken into two major sections, you will be starting with the QUANTITATIVE section. It consists of 21 questions. It is unlikely that you will be able to complete this section in the seven minutes allowed, so you should work quickly and complete as many questions as you can.

**It is suggested to use a paper and pen during this section of the exam**

If you are uncertain of the correct answer to a question, try to eliminate as many of the alternative answers as you can. Your score on this section will be the number of questions you have answered correctly. Answers left out will count as incorrect. There is no penalty for answering a question incorrectly.

Below are two sample problems. Read each sample problem carefully and then indicate which of the 5 possible answers you think is correct.

If you have any questions, please contact [support@oacpcertificate.ca](mailto:support@oacpcertificate.ca) prior to you commencing the assessment. You have seven minutes to complete the quantitative section.

### **SAMPLE PROBLEMS**

Solve the following problem.

1. What is  $13 + 3$  equal to:
  - A. 22
  - B. 20
  - C. 19
  - D. 12
  - E. 16

The correct answer is E, so E should be selected.

Choose the answer from A to E that best completes the sentence.

2. What is the next number in the series 3, 6, 9, 12?
  - A. 14
  - B. 18
  - C. 36
  - D. 15
  - E. 24

The correct answer is D, so D should be marked.
